

GENESIS MOBILE BACK

While in orbit, the spacecraft collected samples of solar wind.

Participate in a NASA Discovery Mission at the Genesis Web site:
<http://genesismission.jpl.nasa.gov>

The Sun is made of the same elements as the planets.

In a mid-air capture, a helicopter will snag the parachute and lower the capsule to the ground.

Upon return to Earth, the spacecraft capsule will deploy a parachute to slow its descent.

Scientists will study solar wind samples to learn more about how the planets formed.
